ENTERTAINMENT HOIST

**KREWMATE**

# Trusted when the show must go on.

While other show motors are out of commission for brake service or regular repairs, the TNER Krewmate entertainment hoist is ready when duty calls. That's because it's built using the latest technology, powered by innovative design and manufacturing processes, and backed by outstanding customer support when you need it.

## 1 Self-Adjusting, Reliable Pull-Rotor Brake

This is the world's most reliable entertainment hoist brake - it even comes with a ten-year warranty. Its simple design has no brake coil to fail or discs to replace, which keeps this hoist working longer and with less maintenance.

## 2 Extremely Durable Chain Guide

Heavy cast iron constructions provides improved wear as the chain is quietly and smoothly guided into the chain bag. Less friction means minimal maintenance and repair.

## 3 Overload Protection With Built-In Friction Clutch

Carbon friction material gives the TNER Krewmate consistent performance even in a wide range of temperatures. Our clutch also protects the hoist from damage and prevents overwinding.

## 4 Non-Drip Grease Packed Gears

For demanding entertainment applications, these maintenance-free, grease-packed gears work to provide years of smooth, quiet operation.

## 5 Flexible, Soft-Grip Handles

Two ergonomic, easy lift handles give you a comfortable and confident grip every time you pack or unpack your motors, making them that much easier to travel with.

## 6 Plug and Play Voltage Changer

Change on the fly between 220V and 440V, saving you valuable time during set up and integration. It's as simple as plug and play.
